

RIDLEY DEAN

About the Dean range

Dean is the ultimate speed machine that'll have you jetting off the starting ramp or flying out of the transition area. Every detail is designed with optimal turbulence reduction in mind. Comfort is also carefully considered so you can get the most of your body. From its smart F-Surface Plus teardrop tubing and paint texturing to its hi-tech system integration ranging from fully adjustable aero cockpit to seatpost.

F-Split Fork

Our innovative F-Split Fork counteracts wind turbulence generated by the turning wheels. It does this by expertly guiding airflow through the split, down the fork arms, and away from the spokes. Decreased air friction means more speed!

F-Brake

Our F-Brake is completely integrated into the fork. Hence, it's made out of 100% carbon material – not even a metal spring is used! It gives your bike a very clean look and saves you weight. Most importantly, though, it wins you more than a 2% aero advantage as it is completely hidden from the wind. With fewer moving parts, it requires less maintenance.
